

Letters to the Editor

Thomas Edison and *Science*

Sir:

It was most appropriate to picture the cover of Volume 1, Number 1 issue of *Science* on the cover of the July 1980 issues of *JASIS*. Unfortunately, the assertion that "The first editor was Thomas Edison" [1] is incorrect. As was explained in *Science's* own centennial issue [2], John Michels was the first editor.

Edison in 1880 was at a high point in his career, working on the electric lamp and developing means to commercialize its use. He was anxious to publicize his ideas on electricity. . . a journal under his influence would have certain advantages. . . while his name was nowhere in evidence in the front matter, the first issue of *Science* devoted two and a half pages to electrical research and contained specific references to work being done at Edison laboratories; later issues continued this pattern. . . Edison agreed to back the journal financially while Michels served as editor, writer, and subscription agency at a fixed salary of \$30 per week."

Apparently, even 100 years ago, there was conflict and confusion in the relationships of editors and publishers, science and technology, academic and commercial interests.

Editor's Reply

Mr. Bezilla is correct. Edison was a founder, not the editor. We thank other readers who also noted the error.
